Role of Internet and its impact on democratic change: A Study

*Sunita Nehwal

Assistant Professor, K.L.P. College Rewari, -123401, Haryana, India

Abstract

Today, the rapid spread of the Internet has started a whole new type of socio-political and religious awakening. With the exchange of ideas at the global level, a path has been paved for new social movements of the global level. A whole new chapter of democracy has started. The Internet plays an important role in mobilizing people and organizations globally and creating awareness in favor of anti-globalization, anti-war, environmentalist, feminist and democratic struggles. Gives a golden opportunity to the general public to express their views and develop consciousness on questions of social, political, environmental, peace, etc. It enables global citizenship, global identity, global state, global governance, and global polarization and profiteering.

Keywords: *Internet, Globalization, Knowledge-Generated Information Technology*

Introduction

The Internet has a very important role in the process of unifying the world's geographical, social, economic, cultural etc. Internet is the most effective medium of the modern era. The Internet is used to promote the social affair. The Internet started spreading its feet in Asian countries from the year 1995. The Internet spread rapidly in rich countries. Due to this there has been a fundamental change in business, business, education, mass media, culture, health, world consciousness and politics etc. Internet services today are giving their services very fast in industrial, commercial and urban areas, in rural areas also the Internet is slowly happening. The Internet is not just a network, but a network of networks. They exchange information for free, if we look at history, it is known that Charles Badagi invented the astronomy table calculator in 1833, he laid the foundation for the birth of the computer. The 21st century has entered the era of "Knowledge generated Information Technology" and today a new society is being created, where knowledge is the primary production resource rather than "capital" and "labour". In such a situation, the society will be able to satisfy the honorable needs of its members more and more, which will give importance to the 'prestige of knowledge'. (Doshi 2002, Chaturvedi 2006)

Today the Internet is a 'Global Phenomena'. This democratic thinking is at the forefront of the democratic process and inculcating the sense of entitlement and increasing the tendency to learn, it is an important tool for expanding consciousness among the ethnic and tribal social groups and making them aware of their past. The spread of the

Internet has ushered in a whole new type of socio-political and religious awakening. Along with the exchange of ideas at the global level, it has worked to give opportunities to many possibilities of public participation for new social movements of the global level. The Internet has ushered in a new chapter of democracy, the possibility of a new century. The Internet is at the forefront of creating awareness and mobilizing people and organizations globally in favor of anti-war, environmentalist feminist and democratic struggles against globalization. The Internet awakens the intangible masses that have yet to be seen. Gathers those who are on the margins. It gives opportunity to the general public to express their views and develop consciousness on questions of social, political, environmental, peace etc. Today the whole world is connected to the Internet. The rapid growth in the Internet and the revolutionary facilities of telecommunications has given a boost to the process called 'globalization' or globalization. As a result, the countries of the world have come closer to each other. This change has happened not only at the economic level, but also at the social and cultural level, today even the common man has not been able to live without being affected by this process.

Today, the rapid spread of the Internet has started a whole new type of socio-political and religious awakening. With the exchange of ideas at the global level, a path has been paved for new social movements of the global level. A whole new chapter of democracy has started. The Internet plays an important role in mobilizing people and organizations globally and creating awareness in favor of anti-globalization, anti-war, environmentalist, feminist and democratic struggles. Gives a golden opportunity to the general public to express their views and develop consciousness on questions of social, political, environmental, peace, etc. It enables global citizenship, global identity, global state, global governance, and global polarization and profiteering. (Chaturvedi 2006, Hepbarth and Waterson 2007)

Today there are information on the use of every person on the Internet. A survey conducted by Active Media has revealed the fact that internet users are giving less time to read books. Seventy percent of the people also watch less TV, that is, this survey has revealed that today the political message has become a common radiance reaching all the people. This problem of political communication has been removed by the Internet, that is, the Internet has played an important role in increasing political awareness. Today the proceedings of the Parliament are more transparent the work of the Parliamentary Committees is being done in a more transparent manner. The reports of what is happening in Parliament and Parliamentary Committees are made available in front of everyone through the Internet, due to the live telecast of Parliamentary proceedings, proceedings of Parliamentary Inquiry Committees and due to the availability of conferencing facility, The elected representatives are communicating directly with their people, which is a sign of the people being strong. Today more and more political parties and voluntary organizations are using the Internet and computers.

Due to the internet revolution, western culture is spreading very fast in our society today. Culture remains mixed with society in the form of our dress, food, language, literature, beliefs and values etc. Today, western clothes have reached Indian villages, especially in the last two decades, there has been a rapid change in the lifestyle of women, which in addition to modernizing them, increases their efficiency and makes life easier. It has also become helpful. In today's society, there is a competition to learn and speak English, the world-class communication language through the Internet. Like upper class children, middle class children also prefer to study in English medium schools today. It is because of the Internet that today we have started celebrating festivals of western countries with great pomp and enthusiasm, Valentine's Day, Mother's Day, Father's Day, New Year's Day, Daughter's Day etc. Fast food and bottled water and cold drinks have become an essential part of our diet. Today our old beliefs and values of life are also changing very fast and our thinking is becoming logical. (Chaturvedi 2006, Hepbarth and Waterson 2007 Singh 2005)

The increasing dominance of the Internet has shown tremendous changes in the field of education. Internet has proved to be a boon for the educational world. It is the internet that the student of Delhi is getting information about the educational institutions of America sitting at home, e-learning and e-education have revolutionized, today online medium by connecting with research institutions and universities through computer and internet. Education is being promoted by, some universities are giving distance education through computer and now the examination is also being done online, even though telegraphing, the scientists here talk abroad and libraries are being online. Any book can be easily read through computer or mobile, so laptops have also been included in the projects in our educational projects. Internet has proved itself to be a boon in the medical field too. With the help of a science called telemedicine, which is completely based on internet technology, now the patient can consult with the doctor of the country and abroad. The doctor can clear his doubts, view the patient report and can also take online payment of his fees. Anywhere in the world, when a new medicine is discovered for a disease, the patient can ask for it and go there for treatment, and can get all the related information there before leaving. Internet has brought Railway Reservation, Advertisement Reservation, Banking System, Insurance Sector etc. at our doorstep in a very simple way, where earlier one used to stand for hours just for payment for various services, it has become a matter of minutes now. Is. Very boring and tiring bill payment related tasks can now be done through the net sitting at home. Now sitting at home, we can know our railway reservation status, train movement status, berth status etc. on Kinger Tips. By using the webcam with the net, you can contact your well-wishers, family members face-to-face sitting at home. There is a myth about the people who work on the Internet that they are the cutest, they are becoming anti-social, the experience of meeting face-to-face in their life is over. Parents are being told that their child's childhood is being snatched away, they are becoming handicapped in a way, they are online all the time, but there is also another side of the truth, people who live online on the internet, The tools of their teaching have changed. Modern teachers and smart children are now using the Internet to gain new knowledge in various ways. The distance of the world is increasing, today the distance has remained as much as it takes to click the mouse. For all professions and social classes of the society, the Internet has realized the infinite possibilities of knowledge acquisition, expression and contact. Is. (Chaturvedi 2006, Patil and Gopal 2003).

"The Internet is inherently subversive," writes David Balcom about his experience with e-mail - "that e-mail is a contextless experience." Yes, used to experience in writing, used to write later, here is the writing, only its basis has changed, now it is in the computer, there was a time words were running behind us, but now only the reaction goes on e-mail we write for self-expression, we want people to know and like us, which the Internet has made a reality. Most of the information technology advertisements are addressed to the youth. They are the main social basis of the information revolution. They are at the forefront of the digital revolution. They are making a new place for themselves. They are roaming freely and comfortably in the internet and digital world, whereas adults and adults do not have this feeling. Children also go to places where adults hesitate to go. In the eyes of adults, computer/internet is for work, for the classroom, while for the youth it is a form of re-creation of social life. As a result, the Internet has changed the way they work. The use of the Internet has enabled youth to participate in culture and government activities, gain the power to question senior officials, give them recognition, and feel independent. (Chaturvedi 2006, Joshi 1993, Sharma 2007).

Children are the biggest consumer of the Internet, after the advent of the Internet, its ill effects on children and incidents of exploitation of women cannot be denied. Children and women are being openly objectified by porn websites. Digital technology has played a major role in making porn material cheap and easily available. Hundreds of photographs can be taken of photos that are misused by digital photography. You can send them anywhere instantly through high-speed internet. Earlier used to sell sex material secretly, read secretly. Sex material for women was very rare, but the Internet has made it available to everyone for free. Today any person can express their sexual desires

on the Internet. His privacy will also be preserved. After the appearance of pornographs on the Internet, it was said that it was a return to the era of porn sexuality. This is the renaissance of Ritikaal. Due to the increasing dominance of the Internet, today the importance of sovereignty in the digital age has been reduced to 'money', the more one earns, his identity starts getting linked with the identity of his nation, as a result the mantra of this new era is- ' 'Digital Money' Today, digital money has entered in all areas, due to this the cost used to create the currency, the problems which were faced in its maintenance, all of them are gradually disappearing, the currency has shrunk to a local level. Due to the Internet, "Digital Money" is taking the form of "Global Money". Today the same currency of many countries can be seen on the world level, the Euro dollar has been born because it is no longer local, the era of currency has become possible through the net, transactions take place in it, coming from space and coming the currency arrives in our pocket or account at the right time, it is possible when the currency gets converted into 'whites' and 'whites have unlimited access'. Today, through the Internet, we can see millions of connections connected together, all exposed in front of them, these Internet connections are giving us lessons that knowledge is exposed before us, but it is a kind of superstition. Computer has reached the potential of man to new heights. The working system of computer is very complex and expensive, while it looks very simple and intelligible. The reality is that computers, internet are going far away from us with knowledge. We start understanding information as knowledge, whereas information or knowledge is just raw material. In computer, we can keep innumerable things, add, edit in a better way, through this whole process we have the impression that we are storing knowledge in our memory, but the truth is that knowledge escapes from memory. seems to do. Huh. (Chaturvedi 2006, Joshi 1993, Sharma 2007).

Conclusion

Today the use of internet has increased very fast in all fields like medicine, science and medicine, architectural philosophy, entertainment, anthropology, space, paper style, mass media in daily use, digital etc. Without internet, life cannot be imagined now. Is. The whole process has increased the concentration of capital in post-capitalism, today virtual reality has made truth accessible, simplistic and artificial, hiding the complexity, it is the influence of the Internet that today every information is becoming universal.
